

FactoryNOW Information Systems, LLC

FactoryNOW Overview

FactoryNOW provides information management services which directly connect machines to enterprise business systems. We provide end-to-end solutions to process raw machine data into valuable business information, accessible by your organization worldwide. Our key focus is supporting geographically distributed equipment with Information Technology tools to increase the productivity of your mobile workforce.

Equipment Monitoring

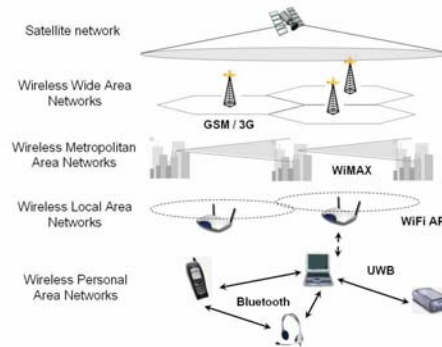

M2M (Machine to Machine) communications systems for Smart Service Management. FactoryNOW allows OEMs to remotely monitor machinery and equipment in-plant, behind firewalls, while providing intelligent reporting and diagnostic tools to improve customer service and enhance brand image.

From entry level starter kits for remote machine monitoring, through portable data loggers for temporary diagnosis, up through turn-key systems which provide enterprise level data management, FactoryNOW provides actionable business information for both OEMs and their end customers.

Network Services

Industrial strength communications infrastructure to support remote equipment monitoring, telemetry, and scada via wireless, cellular, and satellite networks.

We provide hardware, software, and network carrier bandwidth for end-to-end solutions, including resale of cellular/satellite bandwidth for machine monitoring and mobile workforce applications.

FactoryNOW.net also provides managed hosting services for specific applications relating to industrial information management, via web browser access or remote terminal services.

Consulting Services

When you're not quite sure how to best implement Remote Monitoring and Smart Services, we offer Consulting and Implementation services to help you move forward. This includes Technology Assessments, Specifications, Selection of Hardware and Software, and custom developed solutions tailored to your products and your service needs. Whether you're starting from scratch, need an independent review of your strategy, or could use help with implementation, give us a call.
